

JobBOSS

DATA COLLECTION

Gain a more complete picture of your business.

With the pace of business today, flexibility is a key differentiator for shop owners. Track time, job assignments, materials and more to expand your visibility in the face of dynamic market conditions. With JobBOSS Data Collection, guessing at your job costs will be a thing of the past.

JobBOSS Data Collection gives you the tools you need to:

- Automatically transfer time and attendance data to CenterPoint® Payroll or export information to a third-party payroll package.
- Assign labor and machine time to jobs, issue material from inventory, and receive direct-buy materials or parts sent out for services. Group jobs to maximize production efficiency. Assign daily work to employees online and give them shop floor tools so they know exactly which jobs to work on. At job completion, transfer completed parts to finished goods inventory.
- Manage shop floor transactions with the ability to receive materials, receive parts from an outside service, and adjust the on-hand quantity of an item. Transfer materials or parts between inventory locations, and manage work assignments based on material availability. Pick items from stock to fulfill transactions that don't require a job to be created and completed.

Shop Floor Data Collection

Data Collection (DC) Mobile Software

DC Mobile provides a web-based interface for performing data collection tasks on a smart phone, tablet, or barcode scanner. The latest version of DC Mobile is optimized for modern platforms such as Android and iOS. With no limit on the number of users, DC Mobile gives all employees visibility into their work assignments and transactions. Users can look up information pertaining to Jobs, Work Centers, Part Numbers, Material Locations, Materials, and Purchase Orders. For more detail, drill into the details of a job to see routing, picks, and buys.

Workstation Driver Software

Get all the functionality of DC Mobile, plus additional detail via job notes, attachments and drawings. Use JobBOSS Workstation Driver on the shop floor with a keyboard and mouse, touchscreen or barcode scanner to populate Data Collection. You can also deploy a mix of Workstation Driver and DC Mobile to ensure all

employees have the ability to quickly and easily view and update job status with completed work.

Increase Profits through Improved Employee Efficiency

- Ensure employees are working on the right things at the right time.
- Update job status in real time to reduce back-office data entry and error corrections.
- Visibility into material availability reduces the time work in process waits for completion.
- Transparency around employee performance provides KPI data to support process improvement initiatives.

Data Collection gives you the confidence in your final job costs to quote jobs with more competitive pricing. Identify gaps between estimated and actual job costs early on to reduce your risk and increase your profits.
